

```

1  ##Created 16/01/2023 By Roger Williams
2  ##
3  ##What it does:
4  ##
5  ##Creates a 7ZIP file of the teklynx folder which is in:
6  ##
7  ##C:\Users\Public\Documents\Teklynx
8  ##
9  ##ZIP is created on drive D -> D:\LabelBackups
10 ##
11 ##Then copied to filehub: \\FILEHUB\FileHub_Backups\Labels\backups\<computer name>
12 ##
13 ##
14 ##deletes backups older than 120 days
15 ##
16 $7Zip="7z.exe"
17 $Date = Get-Date -Format "yyyyMMdd"
18 ##user folder and computer name
19 $Computer=Get-ChildItem Environment::COMPUTERNAME
20 $BackupDir="\\FILEHUB\Labels\backups\" + $Computer.Value
21 $compareDate = (Get-Date).AddDays(-120).Date
22 $searchPathLocal="D:\LabelBackups\*.zip"
23 $ZipPath= "C:\Users\Public\Documents\Teklynx\*.*)"
24
25 ##create filehub backup folder
26 if (-not (Test-Path $BackupDir -PathType Container))
27 {
28     mkdir $BackupDir
29 }
30
31 ##prepare variables for first ZIP file
32 $ZipName="D:\LabelBackups\" + $Computer.Value + "WIN10Labels_LabelsBackup_" + $Date +
33 ".zip"
34
35 ##now create zip backup
36 ##NOTE: make sure 7z.exe location is in the system path
37 $ProcessStartInfo=New-Object System.Diagnostics.ProcessStartInfo
38 $ProcessStartInfo.FileName = $7Zip
39 $ProcessStartInfo.WorkingDirectory = "C:\Program Files\7-Zip"
40 $ProcessStartInfo.Arguments = "a -r -mx=7 " + $ZipName + " " + $ZipPath
41 $Process = [System.Diagnostics.Process]::Start($ProcessStartInfo)
42 $Process.WaitForExit()
43
44 ##prepare variables for second ZIP file
45 $CopyName=$BackupDir + "\\WIN10Labels_LabelsBackup_" + $Date + ".zip"
46
47 Copy-Item $ZipName $CopyName
48
49 ##Deletes ZIP files older than 320 days
50 ##
51 ##Get old files into a list
52 $Table= Get-Item -Path "D:\LabelBackups" |Where-Object { $_.LastWriteTime -lt
53 $compareDate }
54 ##process list
55 foreach ($row in $Table)
56 {
57     if (![string]::IsNullOrEmpty($row))
58     {
59         Remove-Item -Path $row.FullName.ToString() -Force
60     }
61 }
62
63 $Table= Get-Item -Path $BackupDir |Where-Object { $_.LastWriteTime -lt $compareDate }
64 ##process list
65 foreach ($row in $Table)
66 {
67     if (![string]::IsNullOrEmpty($row))
68     {
69         Remove-Item -Path $row.FullName.ToString() -Force

```

68 }
69 }
